New X300 is SureFire's Most Versatile Handgun WeaponLight

Fountain Valley, CA -- SureFire, LLC, manufacturer of high-end illumination tools and tactical products, announces the birth of their new multi-platform WeaponLight, the X300. When SureFire introduced its X200® WeaponLight series several years ago, they decided to offer two versions: one with a tightly focused beam for extended reach and one with a wider-angle beam more suitable for CQB (close quarter battle) situations. With the introduction of their new X300™, users can now enjoy the best of both worlds with one light.

The X300 WeaponLight's solid-state light emitting diode produces a beam that's tight enough to penetrate the night but with enough surround beam to prevent any surprises in closer-range applications—an unfortunate cause of too many accidental shootings. And with a maximum output of 110 lumens, the X300 is bright enough to both illuminate a threat and temporarily overwhelm his night-adapted vision.

“This updated version of our most popular handgun WeaponLight will offer tactical professionals and concerned civilians alike one weapon-mounted light that just about does it all”, said Derek McDonald, SureFire's vice president of marketing. “Its versatile beam pattern provides users with a tactical advantage in longer-range and close-quarter engagements and makes the X300 a great choice for a home protection.”

The X300's virtually indestructible light emitting diode has no filament to burn out or break, making it immune to the effects of recoil. Electronic current regulation pushes the LED to generate five times the light of a two-D-cell flashlight and keeps it producing

tactical-level output (60 lumens or more) for nearly two and a half hours on a set of batteries. A specially designed Total Internal Reflection lens gathers virtually all of the LED's light and shapes it into a tightly focused central beam with a user-friendly gradually diminishing corona.

A hard-anodized aerospace-grade aluminum body protects the X300's internal circuitry, and gaskets and O-rings make the unit watertight to 30 meters. The light features ambidextrous switching, and an assortment of remote switches allowing precision control without altering one's grip on a weapon are available for many handgun models. The lightweight X300 (only 3.7 ounces with both batteries installed) easily slides on to most handguns featuring a Universal accessory rail. It also fits many rail-less handguns via a SureFire rail adapter and can be attached to any Mil-Spec Picatinny rail, making it a viable option for many rail-equipped long guns as well.

MSRP for the X300 is \$249.00. It is available through authorized SureFire dealers or direct from SureFire by calling 800-828-8809 or visiting www.surefire.com online.

About SureFire

Located in Fountain Valley, California, SureFire designs and manufactures compact, powerful flashlights and weapon-mounted lights as well as high-quality tactical equipment such as sound suppressors, edged weapons, and EarPro hearing enhancement and protection. SureFire illumination tools are used by more SWAT teams and elite special operations groups than any other brand. For information, call **800-828-8809** or visit **www.surefire.com**.
